Technically, the landscape appears ugly for Indus Towers on all-time-frames. The negative takeaway is that technical landscape still suggests overbought technical conditions.

Indus Tower has been an underperformer giving a 3-year return of 50.33% as compared to Nifty Midcap 100 which gave a return of 73%. The momentum oscillators are again signaling weakness after the stock's fall towards 13th January 2025 low at 315.55 - probable intermediate top on cards on the daily charts, confirmation of weakness below 315.55.

Technically speaking, the biggest negative catalyst is prevailing deteriorating technical conditions as the recent down trend in the stock price could trigger some more corrective declines and also on backdrop ugly looking charts, there is limited room for upside. The 200-DMA of the stock is around 369 levels. Also, the recent sequence of lower high low is intact on the daily time frames

Momentum oscillators signaling major weakness on backdrop of price approaching the lower end of the probable 'bearish Flag Pattern' formation on the weekly charts. Negative reverse divergences also appear on the daily and weekly time-frames. Amidst deteriorating technical conditions, the stock is likely to stage massive corrective declines in near/medium term.
